P. Suresh Babu
+918297000725 / psuresh.qa@gmail.com

Professional Summary:

- **Performance Test Consultant** with 15+ years of experience in providing End to End Performance Engineering Consultation and Delivery
- Acting as Practice head for Performance Testing for Hyderabad region
- Expert in Defining Performance Engineering Strategy, designing Workload Model and root cause analysis on Performance Issues
- Industry domains – Banking, Financial Services, Ecommerce, Retail and Travel
- Effectively managed Offshore-Onsite model across various projects
- Experience on various Performance Testing and engineering tools - Microfocus Load Runner, Performance Center, JMeter, BlazeMeter, App Dynamics, Dynatrace, Splunk, OEM, LPAR2RRD and CloudWatch
- Handling Project delivery support, RFPs, PoCs, Technical Interviews, Consultation and Escalations as part of Performance Center of Excellence

Professional Experience:

Oct'14 – Till date **Wipro Limited** **Performance Test Consultant**

Client: JTI – Japan Tobacco International

JTI – Japan Tobacco International – is a leading international tobacco company, with headquarters in Switzerland.
We make and sell some of the world's best-known brands including Winston, Mevius and Camel. Our business was established in 1999 through the JT acquisition of the non-US operations of RJ Reynolds. Since then, we have grown significantly with an internationally diverse workforce of 26,000 people.

Responsibilities:
- Understanding the System architecture, business requirement of the project and detailed requirement for the NFT Testing
- Design Test Plan, Workload model and NFR traceability matrix as per the scope of the project.
- Ensuring the scripting is completed according to the workflows using the Load Runner
- Setting up the Performance Center, Load Runner environment and ensuring successful connectivity
- Executing and Identifying the Performance issues and providing the root cause to the projects

Client: Metro Bank

Description: Metro Bank PLC is a retail banking company based in the United Kingdom, the first high-street bank to be granted such a license for over 150 years. It provides personal and commercial banking services. The company offers personalized credit and cash management services. Other services include saving and current accounts, mortgages, and debit and credit cards.
Metro Bank PLC provides a full range of commercial banking service for retail and institutional.
The employer of choice We strengthen the organization by continuously developing and enhancing the abilities of our people. We nurture them into professional individuals with integrity and passion for service and excellence. We ensure their future by providing them with fulfilling careers.

Responsibilities:
- End to end engagement on Performance Testing and Engineering for multiple projects
- Understanding the System architecture, business requirement of the project and detailed requirement for the NFT Testing
- Design Test Plan, Test strategy, Workload model and NFR traceability matrix as per the scope of the project.

Personal / Individual Use
Internal to Wipro

- Identifying the Performance issues and providing the root cause to the projects
- Working with Tool vendor to setup Performance Testing tool in the Test Environment

Client: Primark Performance Test Consultant

Description: The Oracle Program will support the growth of the Primark Business with a scalable and robust set of systems and business processes. The Oracle Program falls into a number of inter-related parts: Oracle Financials and Oracle Retail will deliver the core applications to be used within Primark and the Retail Reporting Stream, FFE stream, Integration Stream and PSM Stream will deliver those elements required for a holistic and complete end-to-end enterprise solution.
The Oracle Retail Program will provide a new platform for Primark's core retail systems based on a set of products drawn from Oracle's Retail Suite. It will provide the following capabilities:

- Creation of purchase orders and associated products (using a new bespoke orderingfrontend – FFE);
- Cost management, including duty, freight, other expenses and actualization; Pricing;
- Integration with the new Oracle Financials system;
- Integration with the new Teradata data warehouse

Responsibilities:

- Understanding the business requirement of the project and detailed requirement for the Performance Testing
- Go through the System, Technical architecture, NFRs and Interact with Business, architects and finalize the scope of Performance Testing for R3 and R4
- Design Test Plan, Test strategy, Workload model and NFR traceability matrix as per the scope of the project.
- Engage Support and Environment teams for environment readiness, testing tool deployments for use before start of the Performance Test executions.
- Interact with the client and business users to finalize and get sign-off for the design documents created.
- Interact with client for any project issues and tracking the same on a day to day basis.
- Coordinate with other teams involved in the project like Fujitsu Oracle and MSSQL DBA, SiV and WMS
- Referring to the mapping sheets manufacture all ESB interface files for Peak, Soak and Stress testing
- Execute Peak Load test, perform live-monitoring with all support teams Fujitsu, Tech-Team
- Using OEM, Glowroot and other monitoring tools monitor the test, raise defects, follow-up with required team to fix, retest and closure
- Co-ordinate, triage defect call with all stake holders
- Provide regular updates to customer, technical architects and project management team on the progress
- Ensure test executions are performed against the NFR within the project timeline, present the test results to the business team

Client: Nokia Development Platform (NDP) Performance Test Lead

Description: NDP is one of the crucial application platform in Nokia's landscape. Nokia wants to build the NDP platform gradually and replace lot of existing systems which are legacy and not able to cater to the demands of the Nokia. The new solution is based on the modular applications for the Cloud age with usability of all tool features as per module requirement without reinvesting on re-development. The concept is based on evolving cloud technologies

Nokia's vision of building the NDP is

· Best in Class unified Nokia Delivery Platform for Project and Operational management

· Perceived value – Rationalized ecosystem through integration of tools and reduced complexity

Ease of Functionality, Access to what team wants, when they want, how they want and wherever they are in the globe.

Personal / Individual Use
Internal to Wipro

Responsibilities:

- Playing a Test lead role, taking care of complete End to End Performance Testing / Performance Engineering
- Discuss with Customers, Architects and Functional experts to prepare and finalize the NFR
- Ensure all project related documents are prepared and reviewed by respective stakeholders at each phase of the project cycle and have clear sign off from customer
- Done POC for PEGA Applications like Execute and Deploy module using HP LR tool
- Discuss with Application architect team, hosting team and ensure that required servers / VM are made available for setting up the Performance Test Lab
- Monitor all the AUT servers like Web, APP and DB servers during the PT executions, collect the required stats, identify the bottlenecks, report the issues with Dev team for issues resolution / optimizing the code followed by retest and close
- Prepare closure report, have a walk through with customer followed by taking clear signoff

Client: CLK Enerji **Performance Test Lead**

Description: CLK Enerji will be implementing several systems, including an Enterprise Resource Planning system, a Trading system, SCADA & GIS systems, and new infrastructure to support the new IT landscape for CLK EBS Program. The end result will unify CLK Enerji' s logistics, finance, human resources, billing, CRM and payroll operations into one system, Oracle, as well as providing interfaces to the other systems, is a comprehensive program to transform the work that business do delivers timely, customized information to business leaders and employees

Responsibilities:

- Playing a Test lead role, taking care of complete End to End Performance Testing / Performance Engineering
- Done POC with Oracle applications like EBS and CCnB applications using OATS tool
- Prepare and share the POC closure report document and share the same with customer
- Discuss with Application architect team, hosting team and ensure that required servers / VM are made available for setting up the Performance Test Lab
- Initiate the discussion with Project team like Dev and testing team to have the test data created and provided to PT team for validation followed by using them at the time of actual executions
- Design, configure and execute the tests followed by extracting and preparing the executive summary reports
- Monitor all the AUT servers like Web, APP and DB servers during the PT executions, collect the required stats, identify the bottlenecks, report the issues with Dev team for issues resolution / optimizing the code followed by retest and close
- Prepare closure report, have a walk through with customer followed by taking clear signoff

Client: FedEx **Performance Test Lead**

Description: FedEx Corporation will produce superior financial returns for its shareowners by providing high-value-added logistics, transportation, and related business services through focused operating companies

Responsibilities:

- Creating performance test plan, test specification, strategy and approach documents
- Initiate meetings with the BA's and the solution architects to identify the scenarios to be performance tested
- Setup the meetings with the respective stake holders to identify and finalize the load profile followed by deriving the SLA for each of the business transaction
- Prepare / review the KBT followed by getting the approval from the respective stake holders
- Prepare Performance closure reports and share with all the stake holders

Personal / Individual Use
Internal to Wipro

Aug'13 – Oct'14 **Birlasoft** **Performance Test Lead**

Client: WSS ICFTRACK2

Description: The Intercompany Financing (ICF) re-implementation project involves the upgrade and
reconfiguring of the WSS ICF application (WSS Suite and CMM) from version 7.1 to version 7.4.21. In scope for this project is the migration of the payments from Web Cash to CMM. CMM will create a payment file which will be ultimately sent to the Enterprise mapper (EM) application and re-formatted for transmission via SWIFT

Responsibilities:

- Creating performance test plan, test specification, strategy and approach documents
- Initiate meetings with the BA's and the solution architects to identify the scenarios to be performance tested
- Setup the meetings with the respective stake holders to identify and finalize the load profile followed by deriving the SLA for each of the business transaction
- Prepare / review the KBT followed by getting the approval from the respective stake holders
- Identify required pre-requisites for Citrix Protocol setup in Load Testing and SUT environment followed by raising requests with NT Admin team for installation
- Building performance test scripts using Web http/html and Citrix ICA Protocols
- Execute Performance tests followed by preparation of high level reports during the test execution and detailed analysis reports after completion of test execution. Consolidate all the reports and sharing the same with stake holders
- Analyze the execution results for identifying the bottlenecks in application / server / Network
- Analyzing the Java based application logs for identifying the issues caused during the execution cycle and reporting the same to Dev / Ops team for issue resolution
- Provide the required performance measurements data / logs / graphs to Dev / Ops team for issues resolution followed by preparing the RCA documents
- Prepare Performance closure reports and share with all the stake holders.

Dec'10 – July'13 **Semantic space (P) Ltd.,** **Associate Test Lead**

Client: MYVMware

Description: The client wants to revamp performance validation through Performance Driven Development process that was proposed by Wipro. A study has been carried out to understand existing process, gaps are identified, and solution proposed with budget that is needed to implement the solution

Responsibilities:

- Involved in gathering the Non – functional requirement followed by identification of non – functional business impact scenarios
- Creating performance test plan, test specification, strategy and approach documents
- Initiate meetings with the BA's and the solution architects to identify the scenarios to be performance tested
- Setup the meetings with the respective stake holders to identify and finalize the load profile followed by deriving the SLA for each of the business transaction
- Prepare / review the KBT followed by getting the approval from the respective stake holders
- Involved in multiple discussion with ops team / stake holders in identifying the type and number of tests to be conducted
- Involved in test execution setup
- Design / reviewing / enhancing the performance test scripts
- Monitoring of applications like web, app, file, database servers and network through Load runner or custom performance scripts
- Prepare the performance test reports in regular time intervals while executions are in progress and sending the regular updates to the ops / dev team to monitor / triage the identified app / infrastructure related issues.
- Get the periodical updates on the system health of various components like web / app / DB / IDM and SOA servers followed by benchmarking and bottleneck identifications
- Involved in preparation of test completion reports, Performance analysis reports, delivery

Internal to Wipro Personal / Individual Use

checklists and recommendations for performance optimization

Jun'07 – Oct'10 **Interglobe Technologies (P) Ltd** **Sr Software Test Engineer**

Client: TerminalA

Description: This product is being developed for one of the fastest growing Travel Agency (TerminalA) in Europe (Travel Domain). Terminal A is online flight booking engine for end user. System interacts with Amadeus Web service, Travel fusion (LCC) for Air availability and booking. The system is also integrated with MONDIAL for Travel Insurance service. The most unique feature of this booking engine is a tool named IntelliSearch, which brings unique and cheapest fare based on the availability from multiple classes which even Expedia (Amadeus own brand) is not able to return. Apart from flights, the end user can also book car and hotel through this online tool.

Responsibilities:

- Analyze requirements from Product Management, Development, Quality Assurance and Operations teams.
- Involved in preparation of System test plan, Performance test plan and derived performance Test scenarios
- Creation of performance test scripts based on the scenario's identification
- Building up the scenarios, adding them to the Load Runner Controller component and executing them
- Adding the performance counters to the Load Runner Controller component and analyzing the statistics
- Monitoring Web, Application, File and DB Servers while executing the load scenarios
- Monitoring the Application and Web servers by adding the required counters to the Perfmon tool and the monitoring tool Site Scope
- Analyze the results and identify the bottlenecks of the system and report them to development team.
- Verifying the logs from the Database (error logs) for every execution and documenting them.
- Executing multiple scenarios and identifying the memory leakage
- Documenting all the test results, creating the performance analysis test reports and presenting to all the stake holders.
- Involved in Hardware Capacity planning strategic meetings, Baselining Boxes, TPS and Response time
- Prepared POC on QaWizard Pro (Functional and Regression automation tool) and presenting to the client.

Client: ATG-OBS (Online Booking Engine) **Sr Software Test Engineer**

Description: This project is a complete web solution for travel Groups. Five individual projects developed and integrated for his travel solution and main parts are "IBE (Internet Booking Engine)" and "Admin". Admin module is used for managing all the masters for Flight, Hotel etc. IBE has got six modules Flight, Hotel, Car, Cruise, Package and Other Services. This project is a master booking engine so it is designed to sale the services individually to a merchant i.e. A merchant can register himself to take up individual module for his own users. User management and credit points (for frequent flyers) also handled in this application.

Samba payment gateway is integrated for all the purchase. Currently this project is in two language English and Arabic.

Different Interfaces for each service are listed below.

Flights booking system is connected with two GDS systems Amadeus and Galileo.

Hotel booking system is connected with five Hotel Beds, Kuoni, GTA, Allied Tapro and John View

Car booking system is connected with Holiday Autos.

Payment gate way integrated with Samba Bank.

Currency conversion integrated with Xe.com

Personal / Individual Use
Internal to Wipro

Responsibilities:

- Developing Load runner scripts to support long- term performance testing strategies.
- Creation of Performance test scenarios and executing them
- Monitoring the application, Web servers, Application and Databases servers by adding the performance counters through perfmon
- Analyze the test results and Identifying the Benchmark of the Application
- Analyzing the test results and preparing the execution report and presenting to the stake holders
- Involved in Hardware Capacity planning strategic meetings, Baselining Boxes, TPS and Response time
- Creation of Performance Test Result Matrix
- Involved in preparation of System and Performance test plan and test strategy
- Developed System, Integration and User Acceptance test cases using the business requirements.
- Review of system, Integration and User Acceptance test cases
- Allocating the tasks to individuals and making sure the completion of tasks in assigned allocated time.
- Prepared BRTM (Bi directional traceability matrix)
- Conducting Defect tracking and review meetings with all the stake holders
- Actively participated in team meetings with developers to reduce the density of the bugs
- Cross verification of XML Response from Amadeus using Cryptic terminal

Client: **Travel Master (Hotel RFP)** **Sr Software Test Engineer**

Description: Hotel RFP is been developed for US based company Travel Master. Travel Master Hotel RFP application is a MIS application. TravelMaster has developed an application that sources, compiles and aggregates travel data from various sources. The TravelMaster data warehouse then utilizes numerous parsing and algorithmic transactional processes that subsequently analyze travel expenditures. The application reviews data from several perspectives: contracted data, reservation booking data, actual trip data, credit card data and invoiced data. The application is very useful to corporations who strive to manage contracted policy compliance versus actual traveled expenditures.

Role & responsibility as Team

- Review of System and Integration test cases
- Involved in preparation of System Test plan
- Conducted Regression tests.
- Logging the issues in Defect tracking system and tracking the open issues periodically.
- Prepared BRTM (Bi directional traceability matrix)
- Done R&D on Load Runner 8.0 and prepared POC and presented to client.
- Done R&D on OpenSTA and prepared POC and presented to client.
- Involved in preparation of Performance Test Plan and Test strategy
- Involved in preparation of performance test scripts and executing them
- Execute the Scenario and Capture the Results from Analysis.
- Actively participated in Defect tracking meetings
- Preparation of Weekly and Monthly status reports and presenting to all stake holders
